Dear students,

now is the time to go online with your projects. CodeFactory provided you great - 1GB hosting plan during the Full Stack Web Development course. That means that you will be able to share your projects with the whole world and to test your solutions on different platforms.

Here we will cover all necessary steps that you need to do to transfer your files from your computer to the web server:

- First, we need to download and install FTP ([File Transfer Protocol](#)) client. In this example, we will show you how to install and setup FileZilla. FileZilla is one of the most popular FTP clients. On this link you will find a version for your operating system: [Download FileZilla](#); When you download it, please follow default procedure for installation. When you install and run FileZilla you should get the window like on the image below:

- Now you should go to **File > Site Manager**
- Choose option **New site** in **Site Manager** window
- Here you should insert this data, for **HOST: ftp.yourhostname.codefactory.live**, for logon type chose normal and for username insert yourusername and in the password field insert your password, you can see this windows on the image below:

- When you click on **Connect** you should establish a connection with the server
- Now just copy (or drag and drop) what you want to put on the server
- Everything you insert on this location will be available on your url: **yourfistname.codefactory.live**
- Feel free to go with your projects online and share them with your friends and over the whole World Wide Web
- Enjoy
